The screenshot displays the IBM Watson IoT Platform interface. The top navigation bar includes tabs for 'Browse', 'Action', 'Device Types', and 'Interfaces'. The main content area is titled 'Recent Events' and shows a table of live data streams. The table has four columns: 'Event', 'Value', 'Format', and 'Last Received'. The data shows five events, all with a 'json' format and 'a few seconds ago' timestamp. The events are labeled 'event\_1' and contain JSON objects with 'weight' and 'location' fields. The location is consistently 'Coimbatore'. The weight values are 2, 4, 58, 70, and 26. The bottom status bar indicates '1 Simulation running'.
