smart waste
management is
difficult to monitor the
waste in all areas as it
includes more human
efforts.

Detection mointoring and management of waste isone of the major problem of present life

For this complecity we think that we can build an application or website to mointorthe waste and manage the environment effectively.

Says

THINKS

A web page is built to show the status to user monitoring it.

we use IOT device
,python coding for
backend IBM
wastson platform,
web UI and Note
Red for cloud
service.

Smart waste management system for metropolitan cites

Does

Feels

By using this application we can manage the waste and mointor all the areas in an efficitive ways.

Development of applications for city admistrations, muncioal staff.
